PROFILE SUMMARY

Frontend developer with hands-on experience shipping production interfaces across five team projects spanning e-commerce, real estate, healthcare, and finance. Focused on React and Next.js, with a track record of building reusable component libraries and dashboards that integrate cleanly with backend APIs. Currently founding and building a blood donation finder web application as a final-year capstone project, connecting donors with recipients and hospitals in real time.

CORE TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, React.js, Next.js, HTML5, CSS3, Tailwind CSS, SCSS

State & Tooling: Zustand, Context API, REST API integration, Git/GitHub, npm/yarn, VS Code

Design & Collaboration: Figma, responsive & accessible UI design, cross-functional team delivery

PROJECTS & EXPERIENCE

Vendorz — Vendor Management Web Application

2025

Frontend Developer (Team Project) • React, Tailwind CSS, REST APIs

- Built a reusable component library (forms, tables, modals) used across the vendor dashboard, cutting duplicate UI code across the app. *[quantify: e.g. "used in 10+ screens"]*
- Implemented responsive layouts tested across mobile, tablet, and desktop breakpoints to support vendors accessing the platform on varied devices.
- Integrated REST APIs with backend engineers for secure vendor authentication and order-management flows.

PineLeaf — Real Estate Listing & Property Management Platform

2026

Frontend Developer (Team Project) • Next.js, Tailwind CSS, Zustand

- Developed property listing and dashboard interfaces in Next.js, using dynamic routing to serve individual property pages from a single template. *[quantify: e.g. "served 100+ listings"]*
- Implemented client-side filtering and search for property listings, improving how users narrow results by price, location, and type.
- Managed application state with Zustand to keep listing, filter, and dashboard data in sync across components.

Enoral — Clinic & Healthcare Management Dashboard

2025

Frontend Developer (Team Project) • React, Tailwind CSS

- Built dashboards for appointment scheduling, patient profiles, and clinic analytics, consuming real-time data from backend APIs.
- Designed UI components to present patient and appointment data clearly for non-technical clinical staff.

Payment Voucher Automation System

2026

Frontend Developer (Internal Project) • React, Tailwind CSS, Context API

- Designed the interface for digital voucher creation, multi-step approval, and validation workflows, replacing a manual paper-based process. *[quantify: e.g. "reduced approval turnaround from X days to Y"]*
- Used Context API to manage approval-state across the voucher workflow without prop-drilling through nested components.

Blood Donation Finder — Web Application

Final-Year Project — In Progress

Founder & Frontend Developer • React, Node.js

- Founded and am building a web platform connecting blood donors with recipients and hospitals in real time. *[confirm tech stack / add backend & DB details]*
- Designing the donor search and matching interface, aimed at reducing the time it takes to locate a compatible donor in an emergency. *[quantify once live: e.g. "matches donors by blood type & location"]*
- Leading the project end-to-end as founder, from concept and UI design through to frontend implementation.

EDUCATION

Ladoke Akintola University of Technology (LAUTECH)

Expected 2026

B.Tech in Computer Science — 500 Level

EXTRACURRICULAR

- Blockchain LAUTECH — Graphics Designer, contributing visual and branding assets for club events and campaigns.
